

Homestay Booking System

A Modern Solution for Hospitality Management

Project Goals

- **Automation:** Streamline room booking and payment tracking.
 - **Scalability:** Handle multiple property types (Whole Houses, Homestays, Rooms).
 - **Engagement:** Increase customer loyalty via gamified rewards and points.
 - **Reliability:** Ensure secure transactions and moderated feedback loops.
-

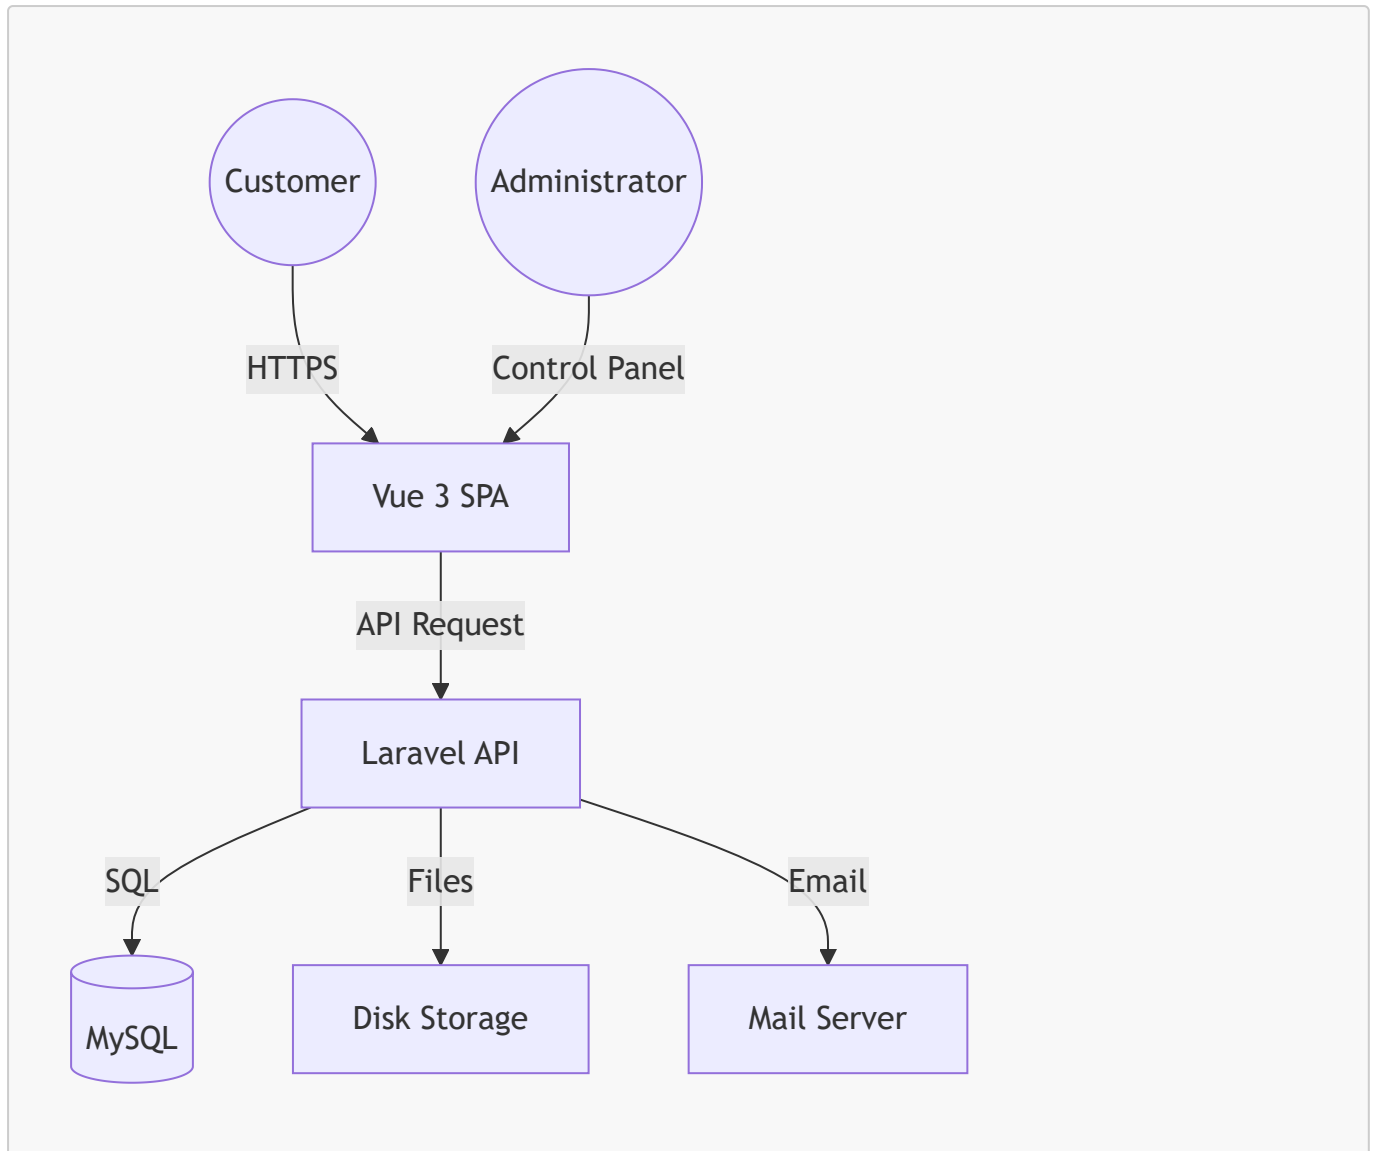

Tech Stack

- **Backend Architecture:** Laravel 10 (Restful API, Sanctum, Mail).
 - **Modern Frontend:** Vue 3 (Composition API), Vite, Tailwind CSS.
 - **Visuals & Charts:** Chart.js for Admin Analytics.
 - **Interactivity:** Lucide Icons, Motion Animations.
-

System Architecture

✨ Key Features

- **Smart Listings:** Priority cover photos and filtered search results.
- **Financial Control:** Deposit handling, VNPay integration, and invoice history.
- **Moderation:** Admin-controlled reviews to ensure quality control.
- **Engagement:** Spin the wheel and 100K = 1 point formula.

🛡️ Security & Performance

- **Hardening:** Route-specific rate limits (auth protection).
- **Sanitization:** Global HTML stripping middleware for all API inputs.
- **Speed:** Optimized queries via database indexing and Eager Loading (Room:with:images).
- **Privacy:** API Resources to hide sensitive data (passwords, internal IDs).

💎 Results & Impact

- **80% Faster** room updates compared to manual spreadsheets.
- **Secure Payments** reduce no-show risks through upfront deposits.

- **Universal Design:** Clean, responsive UI for both desktop and mobile.
